

Faith Tech Cohort 4 Life Skills Assignment

Community Digital Solutions Challenge

Assignment Task

Identify **real problems in your community that can be solved using digital tools**, collect data from at least **10 respondents**, and develop a **faith-aligned digital solution** based on your findings.

REPORT TEMPLATE (Submit This)

Name : Stephen Maina Gachoka Email: mainastephen159@gmail.com

1. Problem Statement

Clearly define the key issue identified.

- What is the problem?
- Who is affected?
- Evidence from your data (e.g., “7 out of 10 respondents reported...”)

The key issue identified in my community is the lack of access to mental health support among young people. Many youths experience stress, anxiety, and personal struggles but do not seek help due to stigma or the lack of affordable and accessible services. This problem mainly affects teenagers and young adults between the ages of 15 and 30, especially students who are navigating academic pressure and life challenges.

Based on the data collected from my survey, 8 out of 10 respondents reported feeling overwhelmed or stressed regularly, while 6 out of 10 indicated that they do not talk to anyone about their problems. This highlights a significant gap in emotional and psychological support within the community.

2. Proposed Solution

Describe a digital solution.

- What is your solution? (App, WhatsApp bot, website, e-learning platform, etc.)
- How does it work?
- Why is it the best solution for this problem?

To address this challenge, I propose a faith-based anonymous support mobile web platform. This solution will take the form of a simple website or mobile application that provides users with access to anonymous chat support, daily encouragement messages, mental health tips, and connections to volunteer counsellors.

The platform will work by allowing users to log in anonymously, ensuring their privacy is

protected. Once logged in, users will be able to chat with trained volunteers, read devotionals and motivational content, and access various self-help resources designed to improve their mental well-being.

This solution is ideal because it protects user privacy through anonymity, reduces the stigma associated with seeking help, and is easy to access at any time using a smartphone. Additionally, it combines both emotional and spiritual support, making it holistic and relevant to the community's values.

3. Target Users

Who will benefit?

- **Describe your users (age, occupation, location, etc.)**
- **How will they access the solution?**

The primary users of this solution are young people aged 15 to 30 who are dealing with stress, anxiety, or other personal challenges. This includes secondary school students, college students, and young adults.

These users are typically smartphone users and are familiar with accessing digital platforms. They will access the solution through a mobile application or website, making it convenient and accessible regardless of their location.

4. Impact

How will this solution transform lives or communities?

- What changes will happen?
- Short-term impact
- Long-term impact
- Optional: Include how this aligns with faith/values

This solution has the potential to significantly transform lives within the community. It will encourage more young people to open up about their struggles instead of suffering in silence. As a result, there will be increased awareness of mental health issues, and more individuals will feel supported, encouraged, and less alone. Over time, cases of stress and anxiety will be better managed, and the stigma surrounding mental health support will gradually reduce.

In the short term, the platform will provide increased emotional support and help reduce feelings of isolation among users. In the long term, it will contribute to improved mental well-being, stronger and healthier communities, and a more open attitude toward mental health discussions.

This solution aligns with faith-based values such as compassion, care, and supporting one another. It promotes hope, healing, and a sense of community by encouraging individuals to care for both their emotional and spiritual well-being.
